PROFILE

RMIT Business Information Systems graduate developing AI applications and personal productivity software through independent, AI-assisted projects. Work spans web/desktop interfaces, model and tool integration, persistent task workflows and Cloudflare-backed sync and release distribution. Use Codex and Claude for scoped implementation, debugging and test iteration, with attention to actual application behaviour.

TECHNICAL SKILLS

Project technologies TypeScript/JavaScript, React, Node.js, Electron, Tauri/Rust, WinUI 3; Python and SQL.

AI & integration Model APIs, MCP, Skills, document retrieval (RAG), REST APIs and SSE.

Cloud & data Cloudflare DNS, Workers, R2 object storage, D1; PostgreSQL/SQLite.

Development workflow Codex, Claude, Git/GitHub, GitHub Actions, Docker; requirements, debugging and focused tests.

SELECTED PROJECT EXPERIENCE

Independent, AI-assisted product development | Current projects

Shixu | Personal Planning & Productivity

WinUI 3 / Windows · Web workbench · Cloudflare Workers / D1 / R2

- Develop a workspace for tasks, schedules, notes, calendar and focus, with a browser edition and native Windows desktop widgets.
- Build proposal-first assistant interactions: users review changes before applying them; browser local-rule assistance is separate from optional desktop cloud models.
- Integrate account-based sync with client-side encrypted tasks and categories, Cloudflare Workers and D1 storage; handle concurrent edits and retain backup options.
- Implement automatic updates and release distribution using Cloudflare R2-hosted Windows packages, with a stable download page and published release information.

fairyllm.com/shixu/

Fairy | Personal Device AI Assistant

Local-first Windows · React / TypeScript · Tauri / Rust · Python · In development

- Develop a desktop workspace for ordinary and project conversations, task activity and generated-file previews.
- Work on model-provider APIs, MCP tools, reusable Skills, document-grounded Q&A and speech input/output.
- Refine the companion’s SVG appearance, window layout and hit-testing; investigate desktop faults alongside focused build/test checks. Realtime companion features remain in Beta.

AI Application Developer | Agent systems, delivery & background

SELECTED PROJECT EXPERIENCE — CONTINUED

Mojo Project Family | Personal & Enterprise AI Workbenches

Ongoing development · Private source · Public-safe case studies at fairyllm.com

Mojo Core provides shared execution services for MojoClaw and MojoAX; Fairy has its own Core. Newer kernel and Skills integrations remain in development.

MojoClaw | Personal AI SaaS — Web & Desktop

React / TypeScript · Electron · Core APIs · SSE

- Develop conversation, project and file-preview workflows with local-runner integration, while preserving Mojo Core-owned execution state.
- Iterate on task timelines, failure diagnostics and retry behaviour, including unknown tool outcomes rather than falsely reporting success.
- Work on project-rule and Skills interfaces, model/tool controls and lazy-loaded panels; use contract and regression checks to keep web/desktop integrations aligned.

Mojo Core | Shared Agent Runtime

Node.js / TypeScript · PostgreSQL · REST / SSE · Local runner

- Contribute to persistent runs, ordered event replay, cancellation, idempotent requests and conversation recovery across product interfaces.
- Work on permission-scoped local execution, MCP integration and document/artifact handling; extend newer kernel, rule-file and Skills paths behind feature gates.
- Use AI-assisted investigation and focused tests for provider/usage contracts, migration compatibility and recovery paths; distinguish automated checks from native and live acceptance.

MojoAX | Enterprise AI Workbench

React / TypeScript · Shared Core services

- Translate business requirements into task-relevant workspaces, pinned/split panels and shared-service integrations, with explicit loading and failure states.

WEB DELIVERY

Systems in Motion | fairyllm.com

Maintain a bilingual, scroll-driven WebGL portfolio with animated project cases and accessible motion controls. Connect the custom domain through Cloudflare DNS to GitHub Pages; use GitHub Actions for builds and browser checks.

EXPERIENCE

Beijing Anxin | Intern Jan 2023 – Mar 2023

Supported big-data platform construction and maintenance; contributed to frontend/backend tasks under supervision, with exposure to production-safety AI and system monitoring.

EDUCATION

Bachelor of Business Information Systems Jul 2022 – Dec 2024

RMIT University | Melbourne, VIC

Diploma of Information Technology 2020 – Jun 2021

RMIT University | Melbourne, VIC
