

MINGZHE ZHANG

RICHIE | AI APPLICATION DEVELOPER

Melbourne, VIC | +61 451 199 287 | zmz1998@gmail.com

Australian citizen | English; Mandarin (native) | [GitHub: babyzmz/Fairy-LLM](#)

PROFILE

RMIT Business Information Systems graduate with two years of self-directed learning in AI tools, applied through MojoClaw, MojoCore, MojoAX and Fairy. Use OpenAI Codex and Claude to develop and iterate on desktop and web applications. Experience includes model/API integration, agent workspaces, persistent task execution and interactive desktop interfaces, with a practical focus on requirements, debugging and testing real application behaviour.

AI-ASSISTED DEVELOPMENT

- **Requirements & planning.** Break feature requests into implementation tasks, define architecture boundaries and write clear acceptance criteria for AI-assisted development.
- **Implementation & debugging.** Use Codex and Claude to iterate on features and investigate errors; refine prompts with repository context, logs and observed application behaviour.
- **Validation & iteration.** Review AI-assisted changes, run focused build/test checks and reproduce browser/desktop issues; distinguish automated test results from native-window and end-to-end acceptance.

SELECTED PROJECT EXPERIENCE

Independent project development | Ongoing

Fairy | Desktop AI Companion

Local-first Windows application | React / TypeScript, Tauri / Rust, Python

- Build a local-first assistant that brings conversations, project work, generated-file previews and task activity into a single desktop workspace.
- Work on model-provider integration, MCP tool connections and reusable Skills, alongside document-grounded Q&A and voice input/output.
- Design and iterate the desktop pet's animated appearance and chat-window interactions, including an SVG-based visual option and layout/hit-testing refinements.
- Explore real-time companionship with local and cloud model options, evaluating latency, hardware requirements and long-session behaviour; advanced companion features remain in Beta.

MojoClaw | Personal AI Workbench

Personal AI workspace | Web / desktop interfaces, shared Core APIs, streaming events

- Develop a personal AI workbench for conversations, project/task organisation and generated-file previews, using an AI-assisted implementation and iteration workflow.
- Connect the application API layer to MojoCore for run creation, streaming, cancellation and conversation restoration, keeping execution state in the backend.
- Investigate authentication and model-provider failures and use targeted smoke checks to validate error handling and working chat flows.

MINGZHE ZHANG

AI Application Developer | Selected projects, technical skills & background

SELECTED PROJECT EXPERIENCE — CONTINUED

MojoCore | Shared Agent Runtime

Backend services | Durable runs, event replay, cancellation and recovery

- Develop shared backend capabilities for durable assistant runs, persistent event replay, cancellation and conversation-state recovery.
- Work on duplicate-request handling, authenticated user boundaries and terminal-state consistency to keep long-running tasks traceable and recoverable.
- Extend command-ledger and agent-tool workflows, including restart recovery and project/artifact operations, with focused contract and smoke tests.

MojoAX | Enterprise AI Workbench

Enterprise-facing application | Shared AI services and business-system requirements

- Develop the enterprise-facing AI workbench and integrate it with shared AI/runtime services, keeping enterprise UI needs distinct from the personal MojoClaw product.
- Translate business-system requirements into development tasks and interface workflows; contribute to integration troubleshooting and deployment verification.

TECHNICAL SKILLS

AI development OpenAI Codex, Claude, Cursor, Windsurf; prompt design and task decomposition.

Project technologies Python, JavaScript/TypeScript, React, Tauri/Rust, REST APIs, server-sent events (SSE), SQLite/PostgreSQL.

Foundations & tooling SQL, HTML/CSS, Vue.js, Java; Git/GitHub, Docker; Windows/macOS and Linux fundamentals.

Applied AI Model/provider APIs, MCP tools, reusable Skills, retrieval-augmented generation (RAG), speech-to-text/text-to-speech and agent workflows.

EXPERIENCE

Beijing Anxin | Intern

Jan 2023 - Mar 2023

- Supported big-data platform construction and maintenance, with exposure to AI applications for production safety and system monitoring.
- Contributed to frontend and backend development tasks under supervision.

EDUCATION

Bachelor of Business Information Systems

Jul 2022 - Dec 2024

RMIT University | Melbourne, VIC

Diploma of Information Technology

2020 - Jun 2021

RMIT University | Melbourne, VIC
